1. Getting Started

Welcome to the introductory guide for the Tactile module for Game Creator 2! Here, you'll discover how to install the module and dive into its included examples to get started.

1.1 Prepare your Project

To install the Tactile module, you'll need to either created a new project or opened an existing one beforehand.

1.2 Checking Dependencies

It is important to note that Game Creator 2 should be present before attempting to install this module.

1.3 Installing the Module

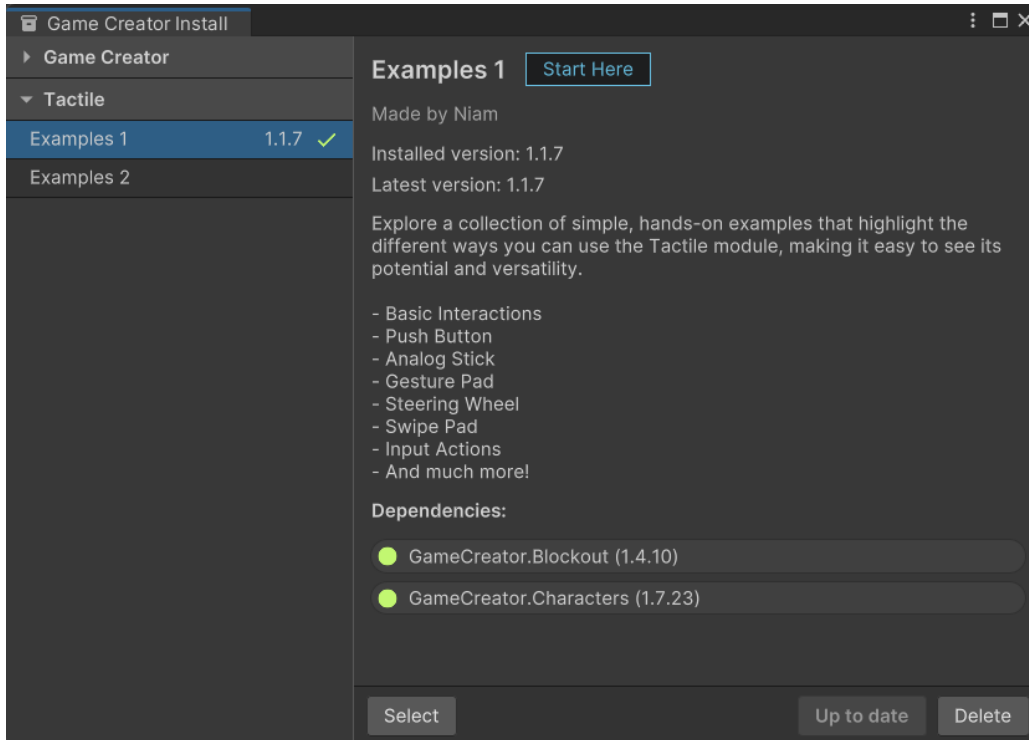

Firstly, ensure that the Unity Editor console is free from any errors that might prevent the scripts from compiling.

1. In Unity Editor, go to "Window" menu.
2. Select "Package Manager" from the dropdown.
3. Use the search bar in Package Manager to find **Tactile**.
4. Click on the package, then download and install the latest stable version.
5. Let your project finish compilation after installation.

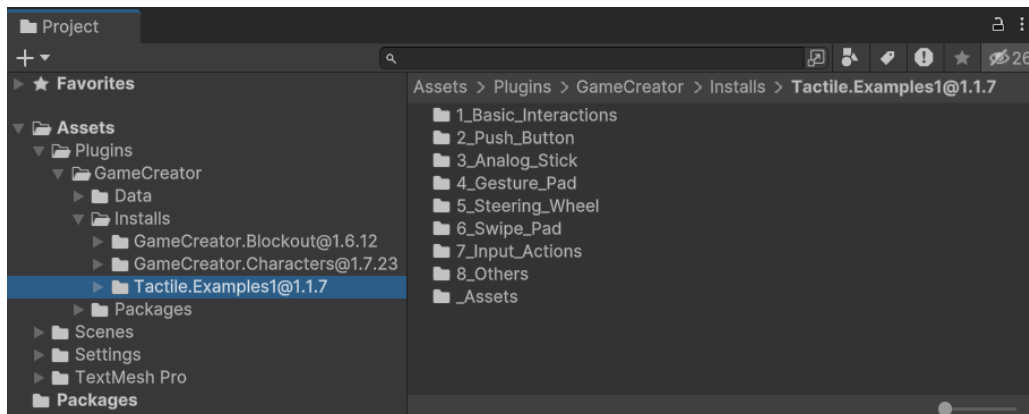

1.4 Installing the Examples

1. Click on "Game Creator" in the top toolbar.
2. Choose "Install" to open the Installer window.
3. Find and expand the "Tactile" section.

4. Select "Examples1" within the Tactile section.
5. Click the "Install" button to start the installation process.

Once you've successfully installed the examples, proceed by clicking the 'Select' button or in the project window navigate to **Plugins/GameCreator/Installs/Tactile.Examples1/**. This will direct you to the location where the Tactile Module examples are stored within the directory structure.
